

color-picker

A simple no-frills js color picker

Setup for dev

```
npm i npm i -g gulp
```

Live dev demo

```
gulp dev
```

Include in your project

Everything you need to get started is in `src/js/ColorPicker.js` and `src/scss/ColorPicker.scss`

Methods on ColorPicker

`create (color)`

Returns a colorPicker element

- `color::"#666"` | Overwrites the default color, uses `colorPicker.set` (below)

`randomColor ()`

Returns a random hex-formatted color

`onPointerDown (evt)`

Intended to be placed inside an existing `pointerDown` function like so:
(reduces total event listener count)

```
function pointerDown(evt){  
    ...  
    ColorPicker.onPointerDown(evt);  
}  
  
document.addEventListener('mousedown', pointerDown);  
document.addEventListener('touchstart', pointerDown);
```

But can just as easily be added in like this:

```
document.addEventListener('mousedown',  
    ColorPicker.onPointerDown);  
document.addEventListener('touchstart',  
    ColorPicker.onPointerDown);
```

Methods on colorPicker element

set (color)

Sets the colorPicker color to the provided value

- color | Accepted formats: rgb, rgba (ignores alpha), hsl, and hex
